TPR™ Rivet

Approved for LIGHTGUARD® and HEAVYGUARD®

The new peel rivet, TPR, offers a unique solution to the problems associated with the mechanical attachment of commercial roofing materials and systems. Designed to curl tightly either inside or underneath the concrete surface of LIGHTGUARD or HEAVYGUARD, the fingers create a gripping area four times wider than the fastener

itself. The TPR is made from an aircraft-grade, high magnesium-aluminum alloy that can't rust and is extremely resistant to corrosion, even in the harshest environments. That's why TPR's are warranted against corrosion as well as backout for 15 years.

LIGHTGUARD/HEAVYGUARD surface

Metal fascia

TPR before expansion

TPR after expansion

Styrofoam® insulation

The TPR has undergone extensive testing at Factory Mutual and has achieved I-90 wind uplift approvals for use in conjunction with a wide variety of deck, insulation and membrane materials.

To Order:

For LIGHTGUARD, order TPR-1 1/2
