

Protect Your Roof Membrane from Hail Damage

LightGUARD® & HeavyGUARD® Protected Membrane Roof Panels from T. Clear Corp.

T. Clear Protected Membrane Roof Systems protect any waterproof membrane from the main causes of roof failures. Including hail.

It's a proven fact! In laboratory tests conducted at Jim D. Koontz & Associates, Inc., LightGUARD PMR Insulation Panels at 40°F withstood the impact of 2" diameter ice spheres traveling at 109 fps, while HeavyGUARD panels held their own against 3.5" ice spheres traveling at over 146 fps before cracking. *Cracked, not failed* as the pvc single-ply membrane under our HeavGUARD panels was never touched. The only damage was to the concrete surface of the T. Clear PMR panels. Nothing penetrated the insulation portion!

It may not be rocket science, but we're still proud because a T. Clear PMR system is based on proven principles that work, and have for over 40 years. To learn more about how T. Clear PMR panels can protect your roof from ultraviolet rays, temperature fluctuations, physical force, wind, and yes, hail, visit our website at www.tclear.com or call us at 1-800-544-7398.

**It's Not Exactly Rocket Science.
It just works!**
